

# Bimetal Thermostat, Thermal Controller, Protectors, Switches Taiwan

---

Ningbo Victor Electric Co., Ltd. is a well-experienced manufacturer, who specializes in manufacture of thermostat. The company was invested 100% by our mother company, Fellowcom Industrial Co., Ltd.in Taiwan and in 2003 set up in Yuyao, a well economic-booming area in Zhejiang, China.

## E3 Series

Childs vehicles batteries for overcurrent and short circuit protection, bimetal structures can protect the security of quick response,compact design, the three terminal versions available, can be connected in the electrical circuit or the built-in lead-acid within the battery.

## E5 Series

Overcurrent circuit breaker is the use of bimetal structures, when the electric vehicle the circuit overload, can achieve rapid power off protection function.

## E9 Series

High-current circuit breaker, using bimetal structures, when the circuit is overloaded, quickly power protection, the highest application to 200A waterproof design, widely used in special vehicles, off-road vehicles winch, yachts & ships electrical control.

## E39 Series

Overcurrent circuit breakers, is the use of bimetal structures, when the automotive circuits overload, rapidly power protection, users can be reset manually switched on again, ATC type push-terminal design, can replace disposable fuse widely used in car modification and maintenance market.

## TSH Series

TSH series thermostat, is a dedicated built-in electrical heating pipe temperature protection device the miniaturization of circular structures, can be combined directly with the heating pipe.

## V7AM Series

V7AM Series is a snap action thermal/ motor protector with conductive bimetal construction. It can provide the devices with immediate protection from overload of electric current and heat.

## V8AM/P Series

V8AM is a steel-cased snap action thermostat/ motor protector. V8AM is suitable for AC/DC motors lighting devices, transformers, battery packs, ballasts, or other small household appliances.

## V6AP Series

V6AP series is a snap action thermostat/ motor protector with conductive bimetal construction. It can quickly respond to overloaded current and temperature for devices and immediately open its circuit.

Ningbo Victor Electric Co., Ltd. is a well-experienced manufacturer, who specializes in manufacture of thermostat. The company was invested 100% by our mother company, Fellowcom Industrial Co., Ltd. in Taiwan and in 2003 set up in Yuyao, a well economic-booming area in Zhejiang, China. Moreover, its transportation network for the eastern area of China has been greatly supported by Hangzhou Bay Bridge and Ningbo expressway
